

LABOR & MAINTENANCE SAVINGS WITH DIALIGHT

According to the US Chamber of Commerce, the manufacturing industry has lost roughly 1.4 million jobs since the onset of the Covid 19 pandemic. Many of these roles might have been responsible for on-site equipment upkeep, including lighting. Maintaining lighting in industrial settings can be extremely costly, burdensome, and dangerous but is essential to ensure employee safety and productivity. With fewer roles to maintain lighting, the need for long-lasting, maintenance-free industrial lighting has never been more important.

At Dialight, we deeply understand the harsh environments that our customers depend on our fixtures to illuminate each day. That's why our fixtures are engineered specifically for longevity in these conditions and most offer our industry-leading 10 year warranty, giving you peace of mind by reducing or eliminating the need for maintenance over the lifespan of the fixture.

Employers are constantly pushing workers to do more with less...let Dialight help you by eliminating your lighting maintenance workload!

INDUSTRY LEADING 10 YEAR WARRANTY

Dialight is proud to offer our industry leading 10-year warranty recognized by the National Lighting Bureau's Trusted Warranty Program. The NLB Trusted Warranty Program recognizes excellence in lighting companies that meet objective quality standards and practices regarding their warranty administration. Acceptance in this program validates companies that reliably stand behind their warranty. Whereas other companies may offer an extended warranty promising to cover the product when it fails, Dialight products are engineered and tested to last.

PROVEN LONGEVITY

Our products feature custom power supplies, low maintenance mechanical designs, the latest LEDs and advanced optics, and advanced controls options. Full design, engineering, and quality oversight is done in-house. Additionally, our products undergo a rigorous testing and validation process to ensure longevity and performance in harsh environments. Testing includes Optical Testing at Dialight's on-site NVLAP certified lab, Salt Spray Testing, Shock and Vibration Testing, Accelerated Life Testing simulating lifetime exposure to excessive heat and cold & fluctuating power conditions, and Fixture Burn In.

**BEST IN CLASS 10 YEAR WARRANTY + NO MAINTENANCE =
SIGNIFICANT TIME AND COST SAVINGS**
